Memo to File:

RE: Winecup Resources
Taylor Livestock Mine
ACT/019/016
Grand County, Utah

On July 13, 1982, Sandy Pruitt, Tom Tetting, and Susan Linner of the Division visited the Winecup Resources mine site near the Dewey Bridge over the Colorado River. When we arrived, approximately 4:00 P.M., no one was on site. The general layout of the site was as it had been during the April, 1982, visit. All the machinery was still in place, and the pond was as it had been before. It appeared that the hillside beneath the cliff to the north of the permit area had been cut into more deeply. The total disturbed acreage at this time was estimated to be 10-15 acres. Some changes had been made on site. The area appeared to be trashier than before; vehicles, trailers, equipment, and supplies were scattered over the entire area. A new shed had been built. It appeared that some kind of processing was taking place inside. It could not be ascertained exactly what the process was but no chemical containers were seen in the area. A new cut had been made just to the northeast of this shed. Some of the gravel pile had been used to face the dam on the water retention pond.

As we were leaving the area, an employee drove up. He stated that they had been testing a new process, but that no chemicals were involved, just water and a mild detergent.

That evening Susan Linner spoke to Ferno Dubray of Winecup concerning the site visit and permitting problems. He indicated that a map of the mine site had been completed and that he would work on the rest of the required information and submit it as soon as possible, within the next couple of weeks.
